

“Advanced Wireless Forms allows us to get data instantly instead of waiting until the end of the week for paper forms.”

- Vanessa Tyler, Manager

Arbor Resources

Right-of-way tree maintenance company in Diboll, Texas

PROFILE

With more than 25 years of experience Arbor Resources focuses on the maintenance of trees in the East Texas area. Arbor Resources contracts work for comprehensive management of vegetation and restoration.

CHALLENGES

Keeping everyone safe is a big part of the daily operation for Arbor Resources. There was a need to track employees and equipment in the field to increase accountability throughout the company. There was also a need for Arbor Resources to speed up their data collection, which took time to round up several different forms from several mobile workers in the field.

SOLUTION

Arbor Resources needed an efficient way to streamline their daily workflow productivity. Actsoft’s Comet Tracker with Advanced Wireless Forms (AWF) was the perfect fit. With Comet Tracker, dispatchers can see the entire workload and allocate the right field worker to the specific task. Leveraging the workers GPS-enabled devices, Comet Tracker reports their whereabouts. The dispatcher can set geo-fences around certain areas to ensure that workers stay within the designated work area. The forms component of mobile application gives the back-end office the ability to create forms by using the web-based generator. The forms are deployable to mobile employees, and they can be accessed online, offline, and stored until an Internet connection is reached.

BENEFITS

Arbor Resources has seen an increase in efficiency by more than 50 percent and saved hundreds of dollars each month with Actsoft’s solutions.

“Tracking employees has increased safety and productivity,” Vanessa Tyler, a manager at Arbor Resources, said. “Advanced Wireless Forms allows us to get data instantly instead of waiting until the end of the week for paper forms.” Dealing with paper forms held Arbor Resources back. It was a slow and inefficient process taking place each day that Advanced Wireless Forms solved nearly immediately.

“We’re no longer dealing with bad handwriting that makes paper forms illegible,” Tyler said. “We have cut down on paper and storage, plus increased efficiency in the field and the office. Comet Tracker and Advanced Wireless Forms are really smooth and were very easy to implement.”
