

“Comet Tracker has helped us decrease our payroll expenses tremendously.”

- Tonya Newton,
HR Manager

JBR Environmental Services

Environmental and industrial cleaning specialists in Spartanburg, South Carolina.

PROFILE

JBR Environmental Services provides cleaning services for environmental and industrial jobs in South Carolina. They specialize in the disposal of hazardous chemicals. JBR Environmental works to keep the community safe from harmful material such as chemical spills, as well as working on construction projects.

CHALLENGES

Safety and accountability are both huge concerns for JBR Environmental. Since they deal with dangerous materials on a regular basis, accountability and accuracy are crucial to making sure everything goes smoothly. Managers had an issue with timekeeping and needed an accurate way to track when employees were on the clock. There was also a concern about how employees behave once on the clock.

SOLUTION

Comet Tracker was the solution JBR Environmental needed. The GPS tracking capabilities of Comet Tracker increased accountability right away. Employees now know that their location is tracked when they're on the clock, so once a shift starts each employee is exactly where they need to be. It's easy for employees to clock in from their mobile devices, and all timekeeping information is sent straight to the office.

BENEFITS

Since using Comet Tracker JBR Environmental has increased efficiency by at least 30 percent and has saved thousands of dollars, according to HR Manager Tonya Newton.

“Comet Tracker has helped us decrease our payroll expenses tremendously,” Newton said. “We're able to run more reports and track workers' time more accurately. It makes it easier to check which employees worked on each customer site and how much time was spent at each site, which helps out with discrepancies.”

Employees are held to a high standard at JBR Environmental and they have stepped up their productivity since Comet Tracker came into the picture. Since each mobile time punch comes with GPS location, management knows if workers clock in before arriving at the work site or clock out after leaving in an attempt to increase their hours. Newton and JBR Environmental are pleased with the results they've seen.

“Comet Tracker makes it easier to keep track of employees.”
