

Wireless Forms

Digitize any forms you use in the field today and access them from your mobile devices. Customize field types, take pictures, and even capture signatures. Once the form is complete and sent, the data is immediately available back at the office for analysis. No more waiting for forms to return, or dealing with misinformation due to lost, damaged, or poorly written documents.

The image shows a smartphone screen with a mobile form application. The form is titled 'Scan field' and is on 'Page 1'. It contains several input fields: 'Description' with the text 'Package Delivery', 'Number' with the value '12', 'Currency' with '\$270.00', and 'Date - Time' with '6/12/2018' and '10:45 AM'. There is a 'Signature' field with a blue line indicating a signature, and a 'Barcode' field with a barcode icon and the text 'New field'. At the bottom, there is a blue bar with the ID '150721P24' and a trash icon. The bottom of the screen has 'Draft' and 'Submit' buttons.

Key Features

- Create electronic versions of forms used in the field.
- Choose from industry-specified, pre-built forms.
- Customize forms to include device features such as: movement, doors opened, etc.
- Design forms using decision logic, which shows specific questions or options based on previous form answers.
- Draw notes directly onto a photo taken if needed.
- Form Workflows lets employees collaborate on completing a document through wireless handoffs.
- Use Barcode Scanning to simplify tasks like inventory tracking.

Key Benefits

- Save time and money by eliminating paper documents.
- Prevent issues caused by illegible handwriting, lost forms, or incorrectly entered information.
- Form transfer is nearly instant, even from the field.
- Easily view data trends from submitted forms with custom graphs and charts.
- Automate the process of running reports to ensure data is available when you need it.
- Increase the efficiency of your workforce's document processing with Form Workflows.
- Foster improved coordination between your company's different departments.
- Keep better track of inventory items, and efficiently manage equipment logs.
