Transport Everyone Safely Every Time With Encore

System administrators need to know where buses are and whether drivers are operating them responsibly. Encore can help.

Encore for the Education Industry

Dispatching - Quickly adjust school bus routes as road conditions change. Should breakdowns or other hazards occur, dispatch white fleet personnel effectively with location-based data.

Wireless Forms - Ensure the safety of drivers and student passengers with digital pre-and post-trip inspection forms.

Alerts - Encore can set lot arrival or departure time alerts. This is critical for planned vs. actual route completion times. Ensure students get to school before the bell and home on time.

GPS tracking - Quickly locate buses, drivers, and the students who are onboard. Monitor bus speed and direction to promote safe driving habits for everyone on the road.

Historical data - Breadcrumb trail technology reveals the exact route drivers took, should any discrepancies between administrators, faculty, or guardians arise.

Reduce fuel costs - Idle and stopped alerts monitor how long engines run in school buses. Pairing that with aggressive driving and speed alerts can help determine if drivers are burning through gas by operating buses irresponsibly.
