Healthcare

Encore Puts the Focus on Patient Care

Comply with safety regulations, manage patient information, and respond quickly whenever emergencies arise.

Encore for the Healthcare Industry

Improve communication - Instantly relay directives, regardless of location. Organize delivery information through secure back-end software and send it directly to your drivers' handsets. Gather and sort information related to patient visits, pickups, and deliveries.

Unparalleled organization - View information relevant to patients and medical service providers. Complete patient documentation, capture signatures, and keep track of inventory electronically.

Timekeeping - Increase accountability with date-and location-stamped information to verify employee actions. View the current employee locations relative to delivery sites and ensure people are where they should be.

Dispatching - Reduce response times in critical situations by identifying employees closest to specified locations. Direct ambulances in emergencies and potentially save lives.

Set the rules - Protect precious medical cargo by promoting responsible driving behaviors. Establish pre-set speed-limit ranges drivers must follow. If drivers exceed those ranges, an alert triggers and reports to the driver's manager.

Reduce fuel costs - Idle and stopped alerts monitor how long engines run in fleet vehicles. Pairing that with aggressive driving and speed alerts can help eliminate unnecessary return trips that waste gas.
