

# Construction

## TeamWherx™ for the Construction Industry

Focus on safety and bolster productivity with a host of features built to solve the problems construction industry professionals routinely face.

### Features of TeamWherx™

**Wireless Forms** – Minimize work-site accidents by keeping employees focused on their tasks instead of on paper forms. Ensure workers achieve government safety regulations every time. Digital regulation forms can also contribute to safety and reduce instances of liability while keeping your organization compliant with OSHA guidelines.

**Job Dispatching** – Use location and job-status data to re-route employees as directives change. See exactly who is working which job to better analyze worker performance, and potentially identify areas for training.

**Intra-Company Messaging** – Improve communication by instantly relaying messages to workers operating at remote job sites. Constant communication keeps everyone safe and organized.

**Mobile Timekeeping** – Eliminate early, extended, or unapproved breaks to maximize productivity. Pay for time worked accurately by tracking the exact durations employees spend on job sites.

**GPS Tracking** – Spend less time waiting on materials and equipment, since you know exactly when supplies should arrive. Track assets and ensure nothing valuable is left behind at job sites.

**Alerts** – Reduce fuel costs by getting notified if engines run idle in your fleet vehicles for too long. Pairing that with aggressive-driving and speed alerts can help determine if drivers are burning through gas by operating vehicles irresponsibly.
