Field Service

TeamWherx™ for Field Service
Optimize communication and boost productivity by quickly sending orders to field workers as they become available.

Features of TeamWherx™

Intra-Company Messaging – Instantly relay directives between workers and administrators, regardless of location. Notify workers of job assignments or updates. Organize delivery information through secure back-end software and send it directly to employees' mobile devices.

Job Dispatching – Send jobs directly to field employees' smartphones or tablets. Reduce downtime by assigning employees to newly created projects and tasks and additional customer locations.

Mobile Timekeeping – Verify worker time punches virtually. Strengthen accountability by identifying early, extended, or unapproved breaks and minimize costly and unapproved overtime.

GPS Tracking – Identify the real-time locations and histories of your vehicles, assets, and workers. Obtain greater visibility into your routes and miles actually driven and minimize risk of theft.

Wireless Forms – Reduce paperwork by processing service requests, work orders, and expense forms digitally. Receive critical information faster from the field and reduce related costs.

Reports – Monitor engine life and usage by accessing data about your fleets' idle versus driving times. Reduce maintenance and fuel costs by analyzing data on speeding, braking, acceleration and other aggressive driving behaviors.
