

Form: Example Application

Do you know ...

Our **electrical diagnostic forms** help electricians digitally complete and document inspections?

- Electricians can submit detailed info, plus audio files, photo validation and customer signatures.
- Completed forms can be shared with managers in real-time vs. at the end of each workday or work week.
- Custom integrations can automatically generate new or revised work orders based on the data inputs.

These forms help firms **expand the scope** and **expedite the handling** of customer work orders.
