

Use Case: Electrical Commercial

Improved Employee Accountability with Actsoft

An electrical company that prides themselves on standard and fast track projects.

Challenges

A commercial electrical company needed a cost-effective business solution that allowed them to track employees and field equipment. Employee accountability was becoming a serious issue for the company when insurance and liability costs rose due to employee speeding violations in company vehicles. They also wanted a way to decrease their fuel costs.

Solution

Company climate, culture, and operations have significantly changed due to the implementation of Actsoft. Landmarks, alerts, and reporting features have changed the way the electrical company manages their mobile electricians. Many of the original devices purchased are still in use with their current electricians making Actsoft the most cost-effective business tool they have for operational efficiency.

Benefits

Actsoft offers the ability to monitor employees and company vehicle use in one simple-to-use application. Reports and travel history in the application make it possible to compare actual times and locations of employees versus their submitted timesheets. This valuable resource saved money when an employee submitted timesheets for a job that did not exist. Employee accountability increased as the “out of sight, out of mind” mentality was eliminated with the implementation of Actsoft.

A vehicle thief was unaware that the vehicle had a GPS tracking system, allowing the electrical company to assist the police department in recovering the stolen vehicle.
